Ojo Ifeanyi Ukiwe

FRONT-END DEVELOPER | ACCESSIBLE, INCLUSIVE WEB APPLICATIONS | REACT, TYPESCRIPT, SVELTE

duio1541@gmail.com | Northumberland, UK | github.com/ifeanyiukiwe | linkedin.com/in/ifeanyiukiwe

PROFILE

Front-end developer with almost five years' commercial experience building responsive web applications in React, TypeScript and JavaScript in an Agile team, and an MSc in Computing. I care about building software that everyone can use: I built WebAudit, a PHP and MySQL tool that audits web pages against WCAG 2.1 AA, and used it as the basis of my dissertation, a controlled experiment with 35 developers on how accessibility reports help them fix real problems. I turn designs into clean, accessible interfaces, integrate and build REST APIs, work with Git and pull requests, and write unit tests with Jest and Vitest. My recent work includes an accessible map application in SvelteKit and MapLibre, tested and deployed on Vercel. I am looking for a developer role in a team that builds inclusive services for everyone.

KEY SKILLS

Front end: JavaScript (ES6+), TypeScript, HTML5, CSS3, responsive and mobile-first layouts from Figma designs, React (hooks, Context API for shared state), Next.js, Svelte 5 and SvelteKit, Vite, Tailwind CSS, Bootstrap

Maps and data visualisation: MapLibre GL JS, Leaflet, Chart.js

Accessibility: WCAG 2.1 AA, inclusive design, semantic HTML, keyboard access and visible focus, colour contrast, ARIA (live regions, aria-pressed), accessible forms and links, accessible alternatives to maps, automated auditing with my own tool (WebAudit)

Back end: Object-oriented PHP 8 with PDO, sessions, authentication, form handling, JSON endpoints, password hashing, Node.js and Express REST APIs, JWT and bcrypt authentication, Apache with XAMPP

Databases: MySQL relational design (six-table schema with primary and foreign keys), SQL joins and aggregates, prepared statements against SQL injection, PostgreSQL stored procedures, MongoDB

APIs: Building and consuming RESTful APIs with fetch and Axios, JSON, error handling and validation on server and client

Quality and tools: Git and GitHub (branches, pull requests, code review), GitHub Actions CI, unit testing with Jest and Vitest, Vercel deployment and serverless functions, browser developer tools, Jira, VS Code; AI-assisted development with every change reviewed and tested

EXPERIENCE

Front-End Developer and Technical Mentor | Exagorazo Global Ventures Ltd (Hybrid) **Mar 2021 – Nov 2025**

- Built and maintained production web applications in React, TypeScript and Tailwind CSS in a multi-disciplinary Agile team of project managers, designers, back-end and Web3 developers.
- Integrated RESTful APIs built by back-end colleagues, handling JSON data, loading states and errors in the interface.
- Turned UI/UX designs into responsive, reusable and accessible components, checking layouts across browsers and screen sizes.
- Improved performance on an existing e-commerce platform with code splitting, lazy loading and asset optimisation, contributing to a 60% reduction in page-load time and a reported 25% increase in conversion.
- Spotted a production failure 48 hours before a client deadline and escalated it to the lead developer straight away; the client was kept informed, I applied the configuration fix and we delivered on time.
- Reviewed colleagues' code, estimated and delivered work in sprints, and coached three junior developers in debugging, developer tools and Git.

Customer Team Member (Part-time) | Co-op Food **Dec 2025 – Present**

- Host the self-checkout area: help customers use the tills, sort out errors on the spot and explain the process patiently to people who find the technology difficult.
- Handle age-restricted sales responsibly, checking ID and following legal requirements and store policy.
- Rotate stock and keep shelves filled and well presented, so customers can find what they need.
- Praised by the Area Manager for excellent customer service; offered additional hours, with two stores requesting me.

Administrative Officer and IT Systems Analyst | Kuuk Nigeria Ltd **Aug 2017 – Feb 2021**

- First-line IT support for colleagues; automated recurring reporting with Excel VBA, cutting manual reporting time by 80%.

SELECTED PROJECTS

WebAudit: Accessibility Auditing Tool (MSc) — *PHP 8.2 (OOP, PDO), MySQL, JavaScript, Chart.js*

- Object-oriented audit engine that fetches a web page, parses it with DOMDocument and DOMXPath, runs 15 automated WCAG 2.1 AA checks, rates each issue by severity with a fix suggestion, and scores the page out of 100.

- Designed a six-table MySQL schema (users, projects, audit runs, issues, WCAG rules, score trends) with foreign keys and cascading deletes; all writes use PDO prepared statements.
- Dashboard showing score trends and issues by severity across audit runs. The tool became the basis of my dissertation: a controlled experiment with 35 developers, now being prepared for publication.
- Protected against SSRF (an OWASP Top 10 risk): only public http/https addresses, private and local addresses blocked, every redirect re-checked.
- github.com/ifeanyiukiwe/webaudit

North East Places: Accessible Map Application — *SvelteKit*, *Svelte 5*, *TypeScript*, *MapLibre GL JS 6*, *Tailwind CSS*, *Vitest*, *Vercel*

- Interactive map of North East towns with a place list and search; selecting a place in the list flies the map to it, and clicking a marker highlights it in the list, through shared state ($state, $derived, $effect).
- Built the list as the accessible alternative to the map: real buttons with aria-pressed, a labelled search box, a results count announced to screen readers with aria-live, and a clear empty state.
- Kept the search logic in a pure TypeScript function covered by five Vitest unit tests (empty input, spaces, capitals, county matches, no matches), and broke the code on purpose to confirm the tests catch it.
- Diagnosed a production-only bug where map tiles failed to render: bundling broke MapLibre's Web Worker path. Fixed it with a Vite URL import and setWorkerUrl, verified with a local production preview, and deployed on Vercel.
- north-east-places.vercel.app | github.com/ifeanyiukiwe/north-east-places

Gaming E-Commerce Platform (MSc, highest-scoring project) — *PHP*, *MySQL*, *JavaScript*, *HTML5*, *CSS3*

- Full stack PHP shop: customer sign-up and login with hashed passwords, session-based authentication for customers and admins, product search, cart, checkout and order placement.
- Designed a six-table MySQL database (users, admins, products, cart, orders, order_items) and wrote queries with joins and prepared statements throughout.
- Built PHP endpoints that return JSON, used by JavaScript fetch calls for live search, cart updates and checkout; added an admin dashboard to view orders and update their status; responsive layout with CSS media queries.
- github.com/ifeanyiukiwe/msc-ecommerce

Infinisculpt (booking platform for a local business) — *React*, *Node.js*, *Express*, *MongoDB*, *Vercel*, *Render*

- Built and launched a five-step booking journey with a REST API: server-side slot generation and overlap checks, an admin area secured with bcrypt and JWT, a CORS allowlist, a health-check route and clear error responses.
- infinisculpt.com

IP Address Tracker — *React (Vite)*, *Leaflet*, *Tailwind CSS*, *Vercel serverless function*

- Shows the location of any IP address or domain on a map. Moved the third-party API key out of the browser into a serverless function, and added a labelled search, a loading status and accessible error messages.
- ip-address-tracker-puce-five.vercel.app | github.com/ifeanyiukiwe/ip-address-tracker

Foodash (in progress) — *Next.js*, *TypeScript*, *Tailwind CSS*, *Jest*, *GitHub Actions*

- Delivery app for corner shops: unit-tested postcode validation, CI pipeline with branch protection and preview deployments.
- github.com/ifeanyiukiwe/fooddash

Pastries Store and CareProNest — *React*, *Context API*, *Tailwind CSS*

- Pastries Store: React shop with a shared cart in Context and live search; diagnosed and fixed a basket crash and added cart persistence. CareProNest: volunteer platform helping families find carers.
- pastries-store-product.vercel.app | carepronest.vercel.app

EDUCATION

MSc Computing, University of Sunderland (2026)

Diploma, Front-End Development (React Specialisation), AltSchool Africa (2024); Diploma, Front-End Development, Genesys Tech Hub (2024)

BSc Economics, Abia State University (2015)

Current learning: C# and ASP.NET Core (Microsoft Learn)

ADDITIONAL

- Member, Rotary International (Morpeth Club).
